What availability tactics are used in the ISSS system. Explain these tactics

- Redundancy

ISSS system uses a lots of redundancy to guarantee the avaliable of system. It has a lot of Host Computer System / Backup Network

- Monitor

ISSS also uses Monitor-and-Control (M&C) consoles to spy the system state.

- Self Test

ISSS uses Self Test tatics to check the system.

- State resynchronization
- Spare

What would our architecture look like if we removed support for availability？

It will like a chain from data to the end.
